

The TRUTH about the original HVAC/R press fittings and jaws.

The only change is the name!

With everything else going on in 2020, RLS made a big change in the HVAC/R industry. We know there's still some confusion out there, so we want to set the record straight with a few facts:

FACT: RLS invented the HVAC/R press fitting and introduced it under the ZoomLock brand in 2015. We continued to manufacture our patented fittings for ZoomLock until late 2020.

FACT: RLS now sells the exact same fittings, tools and jaws under our own RLS brand name. That means the original ZoomLock tools and jaws still work perfectly with RLS fittings.

FACT: RLS fittings are different than – and we feel better than – the new fitting designs on the market. Our patented double circular press, with 360° metal-to-metal connections, was designed specifically for high-pressure HVAC/R. Hexagonal press was designed for low-pressure plumbing.

FACT: Only RLS fittings have a 6+ year proven track record of success worldwide. The new modified plumbing fitting designs were introduced sometime after June of 2019, so they are relatively untested compared to RLS.

Learn more at rapidlockingsystem.com and contact us with any questions via email, phone, website chat or social media. Visit training.rapidlockingsystem.com for our online training program.

The patented RLS double circular press is the only 360° metal-to-metal press connection in the HVAC/R industry, leaving no potential leak paths.

ZoomLock® is a registered trademark of Parker Intangibles LLC, which is a subsidiary of Parker-Hannifin Corporation.
